

## Overview of the Product Range

The Hantarex product Range has evolved from a heavy-duty, Industrial/Professional range of CRT monitors to a highly flexible, stylishly designed, delight of Flat Panel products which fit into three main categories:

The Professional range of data displays is particularly suitable for Digital Signage in Airports, Retail, Railways, Corporate offices, Hotels, CCTV control rooms, Entertainment Centres and Hire applications. The products are available in a small range of 42" Plasma displays or an ever-expanding range of LCD products. Screen sizes are from 32" up to a very impressive 82" and are available with a standard HD Ready screens at 32" and Full HD screens from 40" to 82"

There are two other versions of the Professional LCD displays. We can offer three models that can have a slide-in PC at the rear of the monitor. This is easily removable for maintenance and upgrade purposes. There is also a version that incorporates a solid-state media player, which can be set to continuously display a

series of advertising messages.

The third version of the Professional products is called "self diagnostic" and have a special interface to enable a central location to be informed of the status of the monitor including overheating, backlight or fan failure and can also automatically adjust the brightness of the display to be compatible with the ambient lighting.

The Consumer range of displays is essentially all televisions and is available in many different styles and sizes. There is the Plexy Combi TV product which is available in two sizes 19" and 22". Then there is the Stripe range of Plasma displays with 42" and 50" screen sizes.

There is the Stripes range of LCD displays, which are available in three screen sizes 32" and 40" in Black or Mirrored and the 46" in Black. The most important feature of Stripes is its minimal design provided by a full width crystal front glass and an aluminium structure, which frames the frontal display. The final range is the Quadro televisions that are available in 57" and 70". These extra large displays have a full selection of inputs and are Full HD.

The final category of Hantarex displays is the specials. This group includes the LCD40" Outdoor monitor and the new Totem Digital Multimedia display.

The Outdoor monitor enables TV in any location where external signage is required. The Totem is a digital signboard configured in any way you want. It is available with screen sizes from 40" to 82" and may include a digital signage player or a built-in PC to enable WiFi or LAN updating and proximity activation. It can include optional cooling and can be configured for internal or external use.

Finally, and returning to our roots, we are now able to offer three styles of Videowall products. One is a 34" Fibre Optic seamless cube that can be constructed into a wall of any size. The second is the LCD40" NB monitor which has a 15mm bezel and finally there is the PD42" seamless plasma. All of these products can be operated in portrait or landscape mode.

## Product Advantages

So what makes Hantarex products so special?

- 1) As can be seen from the above we offer a very wide range of excellent and innovative Italian designed products all of which are supported by Hantarex.
- 2) Superb performance resulting from experimentation, R & D and the study of industrial monitors, make the Hantarex brand a guarantee of quality, style and reliability for the Professional and Consumer markets.
- 3) All products in whatever range is selected, are packed with innovative extras such as triple HDMI inputs, RS232 external control interface, source and display address selection and special features such as, picture in picture, wake-up timer and a 5 band graphic equaliser.
- 4) We use top quality components in every product we manufacture and every display is fully tested for 3 days prior to shipment to ensure total "first day" satisfaction with the product and a guarantee for a reliable future.
- 5) We are now using the very special DID LCD panels in our monitors, which are perfect for application driven by PCs or signals such as VGA, DVI, RGB and applications that display static background images like airports and railway stations.
- 6) Hantarex is a trusted brand that has been around for over 40 years (26 years in the UK) and the Company that made the first ever Plasma display not in the Far East but in Italy.

## Installations

Hantarex displays are installed in thousands of installations around the world including many International Airports and some of the major railway stations. Bowling centres, retail outlets and financial institutions are some of the major users in every country. In the UK we are installed at the BBC, Sky and ITV and the Metropolitan police are a customer. We are in most of the Museums and art galleries including the Tate and have recently installed a number of LCD displays into a top London football club, another International Airport and the Jurys Doyle Hotel in London..
